

**Announcing**  
**Visionary's OffsiteBackup**  
Remote Backup and Retrieval System

## Introduction

Visionary's has recently purchased an Offsite Backup Server for our clients. This solution will allow for automatic backups at night of your mission critical data.

### How Valuable is Your Data?

Too often, many small businesses rely on an employee to back up the data to an external hard drive or burnable CD/DVD. While this backup is better than nothing, it is seriously flawed. Most of the time, the employee forgets to backup the data. Also, the problem with these backup procedures is that if your data is corrupt, you will more than likely overwrite your last good backup with corrupt data during your next backup. Then, when you need to restore good data, there is none.

A surprising majority of small businesses do not have a reliable backup system. Whether it be due to budget constraints of implementing an in-house backup server or just being unsure of how to implement backups to avoid disaster, many business owners don't realize that they are placing their own livelihood in jeopardy every day by not having a secure backup system. Unfortunately, some learn the hard way and only after a disaster understand the importance of safeguarding their business data. Why wait for disaster and pay thousands of dollars for an attempt to recover the data from a failed hard disk when you can protect yourself for as little as a dollar a day?

## The Closest to Tape Backup You can Get.... Without buying Tapes!

Many IT professionals will tell you that tape backup is by far the most powerful type of backup you can perform on your data. Why? Because only tape backup offers retention and retention is what gives you the ability to go back to a specific date to restore modified revision's of your data.

Offsite Backup Solutions online backup service is so similar to a tape backup procedure that many experienced IT professionals cannot tell the difference between a tape based backup and our online service. Why is our system better? Because you get all the benefits of a tape based backup without purchasing tapes or the hassle of failing equipment. Plus, you don't have to make special arrangements to take tapes offsite. Your data is already stored offsite.

**First**, we backup your computers and/or servers every day effortlessly and automatically.

**Second**, Your data is backed up in a tape-like fashion where you can restore your data from any backup within the last year or more. (Retention is set by you).

**Last**, your data is held safely and securely offsite in case of a fire or burglary. Your data is stored on two completely separate, fully redundant servers.

Pricing : These prices are about 50% less than any of our competition

Pricing / month per Server	
0-5G	\$25.00
6-10G	\$35.00
11 -25G	\$50.00
26-30G	\$60.00
31-35G	\$70.00
36-40G	\$80.00
